### Top 10 WordPress Hacks

By: Justin Howe @jxowe

## About Me

- Justin Howe.
- I am a freelance developer My business is Wiley Solutions.
- I Teach web design using WordPress as a platform at Sheridan College.
- I've been programming in PHP for 10+ years, and many years of other languages before that.
- I've been using WordPress since 2007
- I am a developer, not a designer, as you can probably see from my slides.

## And I build decks!

## Monthly service

## • Greatest hack in the world is monthly recurring revenue. If you are freelance.

## Backup your Stuff

- Use the Updraft Plugin
- Other Options:
  - Backup Buddy iThemes
  - BackWPUp
- A backup is useless if its not monitored. Remember to monitor everything.
- WPCLI:
  - wp plugin install updraftplus --activate

## WPCLI

#### • <u>http://wp-cli.org/</u>

- A command line utility for administrating your WordPress
- Most major hosts have SSH access
- Most systems have a "blueprint" to spin up a site. You can do similar with a series of commands from WPCLI
  - wp core download
  - wp plugin install updraftplus –activate
- Or and existing site
  - wp core update
  - wp plugin update --all

# Don't have the admin password?

#### • WPCLI:

• wp user create justin justin@wileysol.com -role=administrator --display\_name=Justin

#### o SQL:

 UPDATE wp\_users SET user\_pass = MD5('awaywithyou') WHERE user\_login = 'admin'

## Tiny MCE Hacks

- Problem: Client has something that they enter frequently into posts
  - Visual Editor Custom Buttons
    - <u>https://wordpress.org/plugins/visual-editor-</u> <u>custom-buttons/</u>
  - Shortcodes Ultimate

## Moving your site

- Changes to the URL your WP site is based on will break WP
- There are 2 places in the options table that will fix that.
  - SELECT \* FROM wp\_options where option\_name='siteurl' or option\_name='home'
- WPCLI:
  - wp option update siteurl https://test.com/wp
  - wp option update home <a href="https://test.com/wp">https://test.com/wp</a>
- Also, you can use most backup software to move your site

## Fix a broken Options Table

#### Error establishing a database connection

- Problem: Options table has become corrupt or broken
  - Backups?
  - Copy options from another WP
- WPCLI:
  - wp option update siteurl https://test.com/wp
  - wp option update home <a href="https://test.com/wp">https://test.com/wp</a>
- And a sql statement
  - SELECT \* FROM `wp\_options WHERE option\_name LIKE '%user\_roles'
  - UPDATE wp\_options set option\_name='xxx\_user\_roles' where option\_name='wp\_user\_roles'

## Email Passthrough

- Problem: You cannot get email through a firewall.
  - Override the wp\_mail function with a plugin, redirect mail through http to an external server, send from there
  - Need an external server (Amazon, etc)
  - Watch out for spam

## Hope this was useful to you
